Information about Copyrighted Content

Some instruments administered as part of this study may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

NOTICE
WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

ICPSR PROCESSING NOTES FOR #36146
National Health Interview Survey, 2012

Dataset 4: Sample Adult Level

1. **Stata Limitations**: Due to Stata limitations, the variable **BMI** does not contain value labels for non-integer values within the Stata files.

2. **Variable Link:** Three variables are used to link the 13 datasets in this collection:
   - The variable **HHX** is the household-level linking variable. Merging household-level data with family-, person-, or episode-level data requires the use of **HHX**.
   - The variable **FMX** is the family-level linking variable. Merging family-level data with person- or episode-level data requires the use of both **FMX** and **HHX**.
   - The variable **FPX** is the person-level linking variable. Merging person-level data with other person- or episode-level data requires the use of **FPX**, **FMX**, and **HHX**.

3. **Weight Variables:** The datasets in this collection are unweighted but include several weight variables which must be used in any analysis. Dataset 4 includes the variables **WTIA_SA** and **WTFA_SA**. For additional information on weights, please refer to the user guide.

4. **Additional Information:** For additional information on the National Health Interview Survey, please visit the National Health Interview Survey Web site.

Notes: "Other-specify" responses were assigned to specific groups where possible. Respondents who selected the generic "Hispanic/Spanish" response category were assigned "09", and in cases where the respondent refused to answer Hispanic origin or didn't know it, this variable was assigned "10" and "11", respectively. When Hispanic origin was not ascertained, this variable was also assigned "11". In cases where "Other-specify" responses were determined to be non-Hispanic, this variable was assigned "12" for not Hispanic/Spanish origin, and ORIGIN_I was back coded to "2" or "No" (no group represented respondent's national origin). Respondents coded as "12" answered 2,7,8, or 9 in ORIGIN_I. Data came from HHC.170 & HHC.180.

Keywords: Diabetes age check

Notes: DIFAGE2 indicates the difference between age at diabetes onset and age. This variable was calculated by the age of onset and the current age. For persons 85 or older, this difference may be an underestimate. Unlike in 1999, there is no follow-up question to determine onset in past year. For some with 1 year difference in age, onset will be within the past year.

Notes: (1) BMI was calculated using the in-house version of the height and weight variables, which contain the greater range of height and weight values than are available on the public use file. The range of possible BMI values listed (0001-9994) does not reflect actual calculated BMI values at the extremes of the range, but rather, allows for the theoretical possibility of such unlikely values. (2) BMI = [Weight (kg)/[Height(m) squared]] rounded to 2 decimal places. Conversion factors: 1 kg = 2.20462 pounds; 1 meter (m) = 39.37008 inches. For both men and women, underweight is BMI < 18.5; healthy weight is BMI 18.5 to <25; overweight is BMI > = 25 to <30; obese is BMI > = 30.

Instrument Variable Name: SHTTDAP

Final Documentation Name: SHTTDAP2

There are currently two types of tetanus shots available today. One is the Td or tetanus-diphtheria vaccine and the other is called Tdap or ADACEL™ or BOOSTRIX™. They are similar except the Tdap shot also includes a pertussis (per-TUH-sis) or whooping cough vaccine. Thinking back to your most recent tetanus shot, did the health care provider tell you or did the vaccine information sheet say the vaccine included the pertussis or whooping cough vaccine? The shot is often called Tdap or ADACEL™ or BOOSTRIX™.

Universe: ASTATFLG = '1' and (AGE GE '018' and AGE not IN ('997','999')) and SHTTD05 IN ('1','7')

Description: Sample adults aged 18+ years who have had a tetanus shot in 2005 or beyond or refused to say if they had a tetanus shot in 2005 or beyond

Note: OCCUPN1's 94 distinct categories and OCCUPN2's 23 categories are derived from the 2000 New SOC Occupation Subgroups and Major Occupation Groups, respectively, as determined by the U.S. Census Bureau and the Bureau of Labor Statistics. For additional supplemental information on these Occupation Groups and Subgroups, please see

AAU Appendix

Beginning in 2011 and continuing in Quarter 1 of 2012, the NHIS included a series of questions about emergency room (ER) visits for all sample adults who had at least one ER visit in the past year which did not result in a hospital admission. In Quarters 2-4 of 2012, the universe for these questions was changed to include all sample adults whether or not a hospital admission resulted from the ER visit.

Since there were no changes to the questions or answer codes, the names of the questions did not change. However, since the new universe was implemented, the eight original variables, AERREAS1-AERREAS8, were renamed AERREA1R-AERREA8R.

The final data file will contain both the original and the new variables for all four quarters of 2012. However, the original variables contain data only for Quarter 1, when the questions with the original universe were fielded. The original variables are blank for the Quarters 2-4, when the questions with the new universe were fielded. Similarly, the new variables contain data only for Quarters 2-4, when the questions with the new universe were fielded. The new variables are blank for Quarter 1, when the questions with the original universe were fielded.

National Health Interview Survey, 2012

Variable Description and Frequencies

Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.

Summary statistics (minimum, maximum, mean, median, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.
